

FIREWOOD MENU – EFFECTIVE FROM 01/08/2025

All our Firewood is pre-packed in ventilated bags, as in the pictures below, and this is our standard form of delivery. Bag dimensions are 50cm x 50cm x 90cm (approx.) when filled.

- 6 bags (1.35m³) is the minimum order. Additional bags may of course be ordered at the rate set out below.
- These bags will be unloaded with a sack trolley, and so may be placed conveniently where you require them (subject to the driver’s discretion). They also have integral rain covers, so no more rushing to pack away logs that have been tipped on your driveway! (Although we do not recommend you leave them outside for long in sustained periods of bad weather)
- There is no deposit on the bags, but we would appreciate their return so we can re-use them, which besides being good for the environment, enables us to keep prices down. We can collect empty bags when we deliver your next load, or are next in your area.

What is the difference between Hardwood and Softwood Logs?

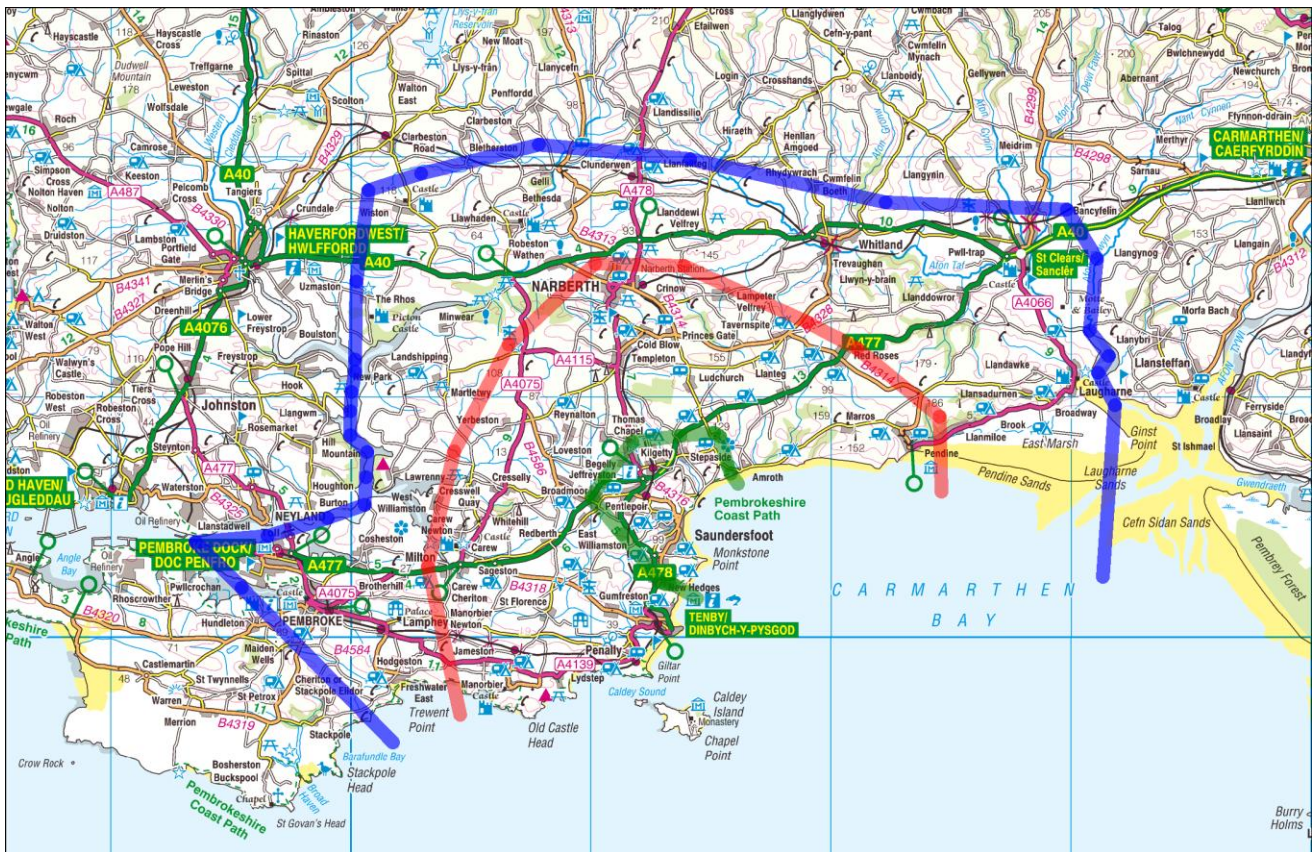

Generally, Hardwoods are denser than softwoods, and typically contain more energy by volume, so they will burn slower and can produce more heat. Softwoods tend to be easy to light and burn quickly (making them very good kindling), but they do tend to crackle and spit more, and so are ideally burnt in wood burning stoves, or with the use of a fireguard if burnt on an open fire.
